

Report on recycled content materials in Ceramic Tiles

Centro Tecnológico da Cerâmica e do Vidro (Technological Center for Ceramic and Glass from Portugal) hereby declares to have performed an audit to confirm the incorporation of recycled material into ceramic tiles products, produced by GRESART - Indústria Cerâmica, S.A., located in Oliveira do Bairro, Aveiro, Portugal.

Recycled materials includes process waste like dusting powder, dust emissions from treatment systems, spray dried powder and dry ceramic pieces.

It was confirmed that the percentage of recycled materials incorporated into the production process is as follows:

Ceramic Product, references of GRESART:	% recycled material included	Sources:
Floor tiles: Glazed ceramic Glazed porcelain	20-27%	Internal quality data: Internal wastes from the process
Wall tiles: white body monoporosa	28%	External data: external wastes

The audit was based on the analysis of registered data and information contained in documental management system of GRESART for the production of ceramic tiles, raw materials supplier data, as well as a visit to the production unit namely to the points where wastes and materials are processed.
